

INTRINSIC Colour Collection

Colour Blending Wheels

These colour wheels have been specially created using only the shades in the Intrinsic Colour Collection to give you a helpful guide to some of the blending options possible with the set.

Each wheel illustrates the colours in the set with white in the centre, and black as an outer ring, blending in 26% towards the centre.

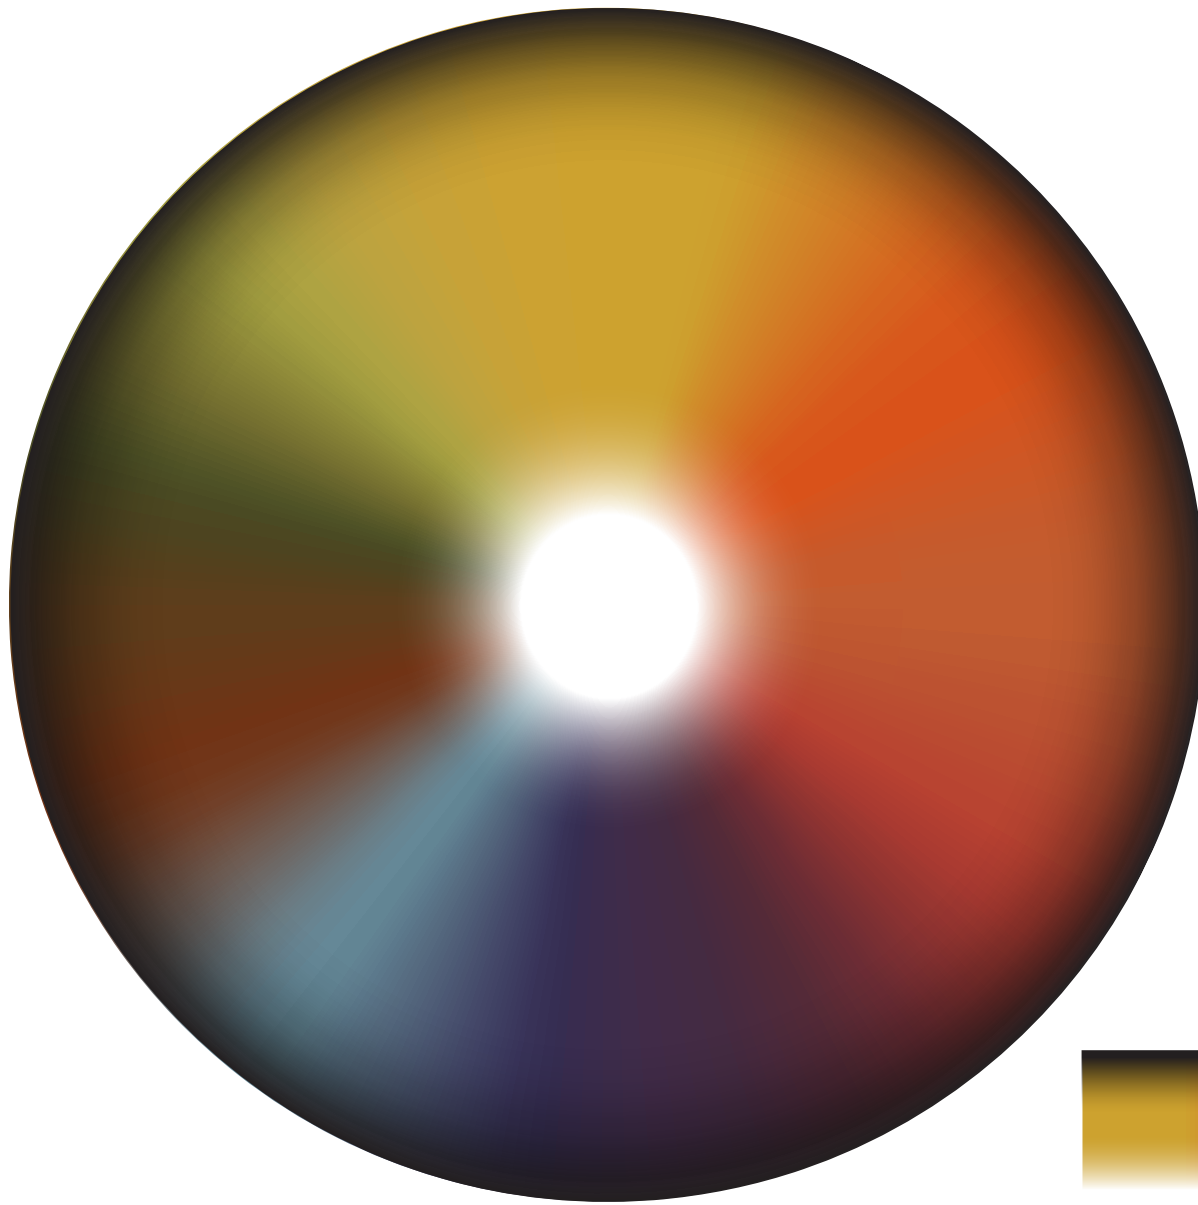

Below is a gradient line for showing the same shades, with black and white shades top and bottom.

Beneath each wheel, are photographs (clockwise from the top of the wheels) of the dry colours applied as a single coat to plain sycamore, with one coat of danish oil over the top.
